

There is a chance you can run into issues when installing PostgreSQL and starting PgAdmin. But don't worry, there is tons of help article on the internet, just google with the exact error. We have compiled some of the most common scenarios and how to fix them:

1: Pgadmin does not open, even after multiple attempts

Uninstall PgAdmin downloaded with Postgres, and install fresh from its website:

<https://www.pgadmin.org/download/>

2: Error – The pgAdmin4 server could not be contacted (sample error below)

Make sure the postgres service is running (see #6)

Delete the contents in folder - C:\Users\%USERNAME%\AppData\Roaming\pgAdmin\sessions
(folder will be hidden)

Right click on pgAdmin and run as an administrator

3: When trying to restore the dvd rental database, I get an error for utility not found

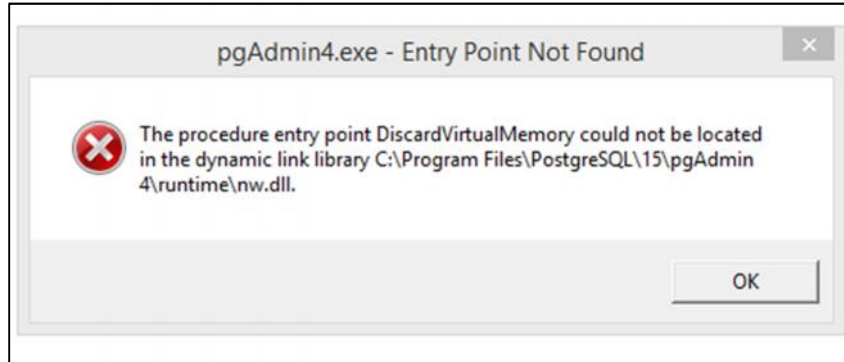

Please see the video "Introduction to pgAdmin" at 4:15 minutes to solve this error.

If you are using Mac the default path would be - /Library/PostgreSQL/15/bin

4: Does not ask for master password when opening PgAdmin

May be you clicked on the do not ask again checkbox. If you are able to proceed without having to enter a password, its ok, go ahead.

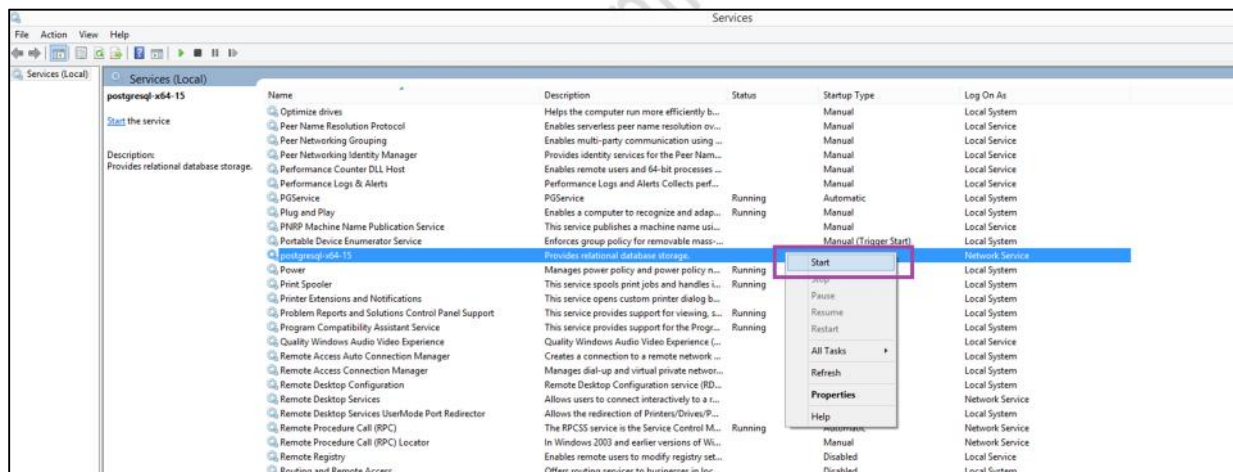

5: Entry point not found error:

This means a problem with some dll file. It's not recommended to download dll file, as it can be corrupted and bring virus. Please check - <https://www.makeuseof.com/entry-point-not-found-error-windows/>

6: Pgadmin shows error for Postgres service not running

You will have to start the Postgres service. To do that, go to Control Panel > Administrative Tools > Services. Right click, and start the service with name postgres

If you are still facing issues post uninstall and install:

- 1: Delete the Postgres files from installation location (C: >> Program files >> postgres)
- 2: Clear out the folders - C:\Users\%USERNAME%\AppData\Roaming\pgAdmin\ & C:\Users\user\appdata\local\pgadmin
- 3: Install the postgres.exe file as an administrator
